- Python
- MERN STACK
- SQL
- GIT
- Machine Learning
- Natural language Processing

📂 PROJECTS

Toxic Comment Classification (NLP) ↗
- Classifying comments as toxic or non-toxic based on their language content (English).
- project employs text classification methods to achieve real-time identification and categorization of toxic comments, contributing to safer online communication.

Online Training platform ↗
- Designed and implemented a user-friendly student interface
- Designed and developed RESTful APIs for communication between front-end and back-end.

Token Sliding on outer planar graphs ↗
- Implemented an algorithm to check rigidness of tokens in Halin graph.
- Created a repository on subclass and superclass of outer planar graphs that exhibits higher computational complexity.
